

## Terms & Conditions

1. The water heater must meet all program criteria and be fully approved by the Utility.
2. The customer will agree to the utility's connection of load management equipment to the water heater and to its control of operation for a minimum of three consecutive years.
3. The customer will permit the Utility to periodically inspect the installation and to maintain the load management equipment. Unauthorized disconnection or removal of the equipment will result in the customer being billed the amount of the rebate.
4. The Utility will not be liable for loss or damage caused by normal interruption of service.
5. No other utility sponsored incentive rates, rebates or credits are offered by or in conjunction with this program.
6. No connected water heater location nor customer at said location will be eligible for the program rebate more often than once during any 10 year period.

# WATER HEATER REBATES

**Alexandria Light and Power**  
*Keeping Us All Connected*

**320.763.6501**

## PROGRAM INFORMATION

ALP offers its electric customers rebates to purchase top quality, energy efficient electric water heaters. ALP controls these water heaters during peak electrical loads so the Utility can continue to offer low-cost energy. To qualify for a rebate, water heaters must meet the following criteria:

1. Must be an electric water heater with a minimum tank capacity of 50 gallons.
2. Must be connected to an energy control unit to cycle or curtail during utility peak loads.
3. Must have an energy efficiency factor of .92 or greater (in accordance with the DOE Code of Federal Regulations Title 10 Part 430 Subpart B).

Controlling water heaters saves thousands of dollars each month.

## REBATE AMOUNTS

As a participant in the program, the customer can receive one of the following rebates from the utility or can elect to have the rebate applied directly to the customer's ALP account.

**50 Gal or larger on cycling program**

**92% or greater efficiency factor**

**The price of the heater up to \$200 per heater**

**or**

**80 Gal or larger on curtailing program**

**92% or greater efficiency factor**

**The price of the heater up to \$350 per heater**

Upon the customer's purchase and installation of a qualifying water heater, ALP will install a load management controller free of charge. This will enable the water heater to be controlled by ALP during peak electric loads. **Cycling** allows the water heater to heat for short durations during peak time to maintain water temperature. **Curtailing** does not allow the water heater to heat during the entire peaking period. **The water heater will NOT receive the off peak rate on this program.**

After the application has been completed and the water heater and load management controller installed, ALP will issue the rebate.
